The chart below shows the numbers of three types of visitors to a museum between 1997 and 2012

The bar chart compares how many travellers went to museum within three different age forms, such as adult, under 15 and special exhibition over the last 15 years, starting from 1997. Overall, while the number of total and special exhibition visitors increased, the opposite was true for that of under 15-old people. Also, the figure for travellers who aged over-18 was highest during the period.

In 1997, young tourists in museum was 120000, lower than a half-double of adult visitors and higher than 28000 of special. Over the next 5 years, there was a slightly dropped by 10000 in children visiting museum. By contrast, during the same times showed a marginal rose to 29200 in the figure for special visitors whereas that of adult tourist was 1000.

From 2002 to 2007, there was a quickly soared in the frequency of the visiting museum. The figure for over-18 aged visitors substantial expanded and recorded the topmost value(at 0.4 million) in 2007, while that of exhibition travellers was lowest (over 37000) and 87000 people under fifteen in between. Meanwhile, the period between 2007 and 2012 was witnessed the slightly downward trend in the number of adult, under 15 group to 380000, 82300, respectively, except exhibition people(rose by 5000 people).
