

**ĐỀ 13/6/2020. When cars and cyclists use the same roads, there are often problems. Why is this the case? What are the solutions?**

In modern society, everyone are driving cars and bicycle on the same road, and it lead to some various problem. In this essay, I will explain a reason for it and make a solution for address it.

To begin with, this thing is able to make a traffic accident easier than moving in distinct roads. Besides, in these accident, the rate of death will be risen, due to the cars are bigger size than bicycle, occupied large space and faster velocity. Furthermore, moving only on one street without divide into two-land also rise the traffic congestion. This is impact on driver's emotion: give some irritated, uncomfortable, as well as waste of their time. For instance, a person is faced with the late for appointment with someone because of waiting a long time in front of those who driving bicycle with slowly or average speed.

In order to improve this trend, there are two reason which can be proposal. First, authority set up traffic signs which describe the velocity's limit under 50 kilometer per hour in the mixed street. It is factor which help the car drivers control as good in speed, reflect on any movement, minimize damage as much as possible. Not only so, implementing distinct lane also useful way, help driver identifying their street and avoid part road of other people. Moreover, they are set the banned time for cars in the narrow streets, accompany with traffic punishment to raise their awareness in transporting.

In conclusion, cars and cyclist moving in the common street is unavoid, specially this tendency appear obviously in the, but I believe that government can address this issue fastly and no converting it into the negative issue.
