

### **Bar chart 4/5/2024**

The bar chart illustrates the proportion of people in four nations working in three different categories (agriculture, industry, services) between 1980 and 2010. Overall, industry was the dominant category in Germany, America and Japan with the higher value. Also, most of the proportion in China witnessed a significantly decreasing during the same period.

The percentage of German industrial labors was 60% in 1980, higher than 51% that in America and 48% of Japan. In addition, this rate in the group choosing services in three capitalist nations made up from 40% to a half, whereas the figure for individuals in China recorded the same value which compared to Germany, 50%. Besides, farmers in those countries accounted the very few, under one-tenth, contrastly that of China was 70%.

Until 2010, the rate for China citizens working in agriculture significantly dropped by one-fifth while that of those who in industry remained unchanged and service participants slightly dropped by 30% in the same time. Regarding to the three other countries, the percentage of industrial employees rapidly grew by one-fifth in both of Germany, US and 30% of Japan. Meanwhile, the rate for services worker and farmer witnessed a slight decrease, by around 10% and 5% respectively.
