Some people believe that the rapid increase in population these days is unsustainable and will eventually lead to a global crisis. Others believe that the world population increase is necessary and beneficial as it creates the growth of the world's economy and society. Discuss both these views and give your opinion.

Some people argue that the faster rising in demographic recent year being uncontrollable, as well as devising international crisis, while others believe that it make some advantageous because of the climbing up of economy and public. This essay will examine both views and explain why I lean forward the latter.

On the one hand, there are some reason why to prove to point: the expansion of resident is uncontrollable and devise crisis in the range of world. First, it make a huge pressure for the natural resources, transform the environment to worse than. Increasing in the demand of human about food, energy lead to the destroying of biology area, cutting down of forest, create the pollution of water, air. Another reason is that it is impact on infrastructure, policy with resident, quality of life. These expansion in the large range make an overwhelmed residential, traffic congestion, rise the rate for the lack of household and over in healthcare, For a long time, if these condition have not solve, it is spread to other, explore into gigantic crisis.

On the other hand, I side with those who believe that this phenomenon will install some advantage for social and economy. Firstly, increasing the population make the employment for individuals, foster the economy smarter, better than. In fact, there are witnessed in the countries where having highest people, such as China, India. Additionally, the rising of population will make up about many cultural diversity. Many people are able to approach with other of other location, create the life with more vivid, vibrant. Apart from this, not only bulding up the different cultural from communities, but also emotional value is installed, side-to-side with the economic's development.

In conclusion, increasing population is the problem which have not avoid at present and afterward. I believe that the government will seek the useful method to solve it, advantage more than drawback.
