

Đề 21/10

Many students find it is harder to study at university or college compared to when they were in grade school. Why is this? What are some possible solutions for this problem?

There is a consensus in the part of students that the process of university nor college learning harder than that of high-school. This essay will shed light on the cause of above actual and propose viable solutions.

Most of the reason originated from students. First, students must make acquaintance with new studying method, huge mass of knowledge when changing learning environment. This is evident via strict requirement in subject that university set. Instead of teachers dedicatedly guide for them from start to end, they must adapt to the self-education, teamwork. Moreover, class sizes are very larger – which would be blocked not only an individualistic communication between student-teachers, but also decreased the likelihood acquire the root of knowledge. As a consequence, their problem have never been solved with the condition.

To solving this problem, even as high-school, teachers must clarify distinct of knowledge level for students, just as consequences such as fail the exam, restudy if they say hard. Nevertheless, university is the supportive factor for students's knowledge. To illustrates, a number of higher education institutions in Vietnam introduce free short-term courses as a parallel to the core curriculum. Through these, students find out useful material for self-learning. Furthermore, lecturers should priority spend more time on solving student's question.

In conclusion, hard or easy knowledge depend on each person even if learning any education form. Students are the main factor which decide future, contribute to job market.
