

Cam 16 Test 4

Xe ko người lái trong tương lai

In the future all cars, buses and trucks will be driverless. The only people travelling inside these vehicles will be passengers. Do you think the advantages of driverless vehicles outweigh the disadvantages?

Transportation vehicle will not used by driver and replaced by self-driving system to serve passenger in the future. From my viewpoint, I believe that the advantageous and drawbacks of this trend are alike and this essay will explain to this argument.

On the one hand, autonomous cars can devise some benefit when being installed in transport system. This is a useful method which substantially reduce the rate for traffic accident while that of human driving is higher. Drivers are object who owning common mistakes, such as using alcohol or unfocused during controlling vehicles. Virtual system replace drivers in use vehicles, solve any situation on the road to flexibility, so people want to induce installing self-driving. Besides, people can moving in the night or early time which no worry about any problem might take place.

It is undeniable that self-driving bring many pros about citizens, improve quality of life. Nevertheless, the popularity of self-driving vehicles impact on some people, specially drivers. It is a crucial tool which help them earn to money for family, stay work. They would be jobless if this vehicles types are implemented. In some case, this is lead to actual state lost of balance in working market, no one want to offer in this job due to AI have replaced. In addition, security is the essential problem which discussing. Obviously, human has not mastered autonomous technology, so that these system can cracked or attacked by hacker with negatively purpose. In this time, it is become criminals which threat the safety from people.

In conclusion, while the pros of driveless vehicles exist parallel with cons, I believe that leaders can implement this technology useful and do not affect to anyone.
