Some people say that the Internet provides people with a lot of valuable information. Others think access to so much information creates problems. Discuss both views and give your opinion.

Some people argue that the Internet supply the public to many beneficial information, other, however believed that this information can bring about other issues. This essay will examine both views and explain why I lean forward the latter.

On the one hand, I think that the Internet information is beneficial. The Internet is a enormous library, where you can find information you like. In fact, the most up-to-date information can be found on the Internet, rather than paper books which become out of date very quickly. Thanks to internet, individuals can finding it from all over, regardless of geographic distance. These could range from learning about culture of another country without leaving nation to doing more online shopping by endless amount of videos, applications, blogs. With students, accessing to a wide range of online information resource is a convenient way to finding out information and developing independent research skill. This had opened up new oppoturnities to improve their knowledge.

On the other hand, I side with those who believe that the Internet information is a worrying isssue. Not all website are reliable or contain accurate information. Misleading news on social platforms can cause a number of serious problems to whole society. Social networking platform tend to people informed about unfavorable news instead of encouraging content. From an security perpective, high-tech crimes normally will cheat internet users to bank in money to them by counterfeit content which people believed this. Second, internet is harmful to little children. Nowadays, it can provide an easy medium to children to gain access to many uncontrollable information, such as violence and illegal activity. It can cause them to change societal beliefs towards the adverse. In the event of well-known people, internet fake news can cause of boycott toward with them as soon as it speard to public.

In conclusion, Internet is a double-edge sword. People should be careful to distinguish and choose wisely between information on the internet.
